Secure, compliant document and email management in the cloud

Autonomy WorkSite in the Cloud
Take collaboration to the cloud

Many companies today are opting for cloud-based solutions to meet their most stringent privacy and security requirements for document management. Cloud computing can provide new levels of collaboration, agility, speed, and cost savings for enterprises of any size and type. The shift from an on-premise delivery model to on-demand, cloud-based solutions lowers costs and mitigates risk. Using Autonomy WorkSite in the Cloud, organizations can leverage the benefits offered by cloud computing, while making business documents and email accessible from any access point, including the internet and mobile devices. For added ease of use, WorkSite manages all electronic content in the cloud over standard Internet connections.

Autonomy WorkSite in the Cloud provides the same capabilities as WorkSite on-premise, allowing you to implement and promote collaboration across distributed teams and clients to ultimately improve profitability and customer service. WorkSite in the Cloud is exceptionally easy to use, deploys across organizations quickly, and requires minimal training for a lower total cost of ownership and rapid return on investment. Rather than relying on email to share and iterate versions of documents, WorkSite provides a common location that mitigates the risks associated with sending an out-of-date or incorrect version of a document.

WorkSite in the cloud

WorkSite in the Cloud enables rapid deployment, enhanced collaboration, and on-demand scalability. The hosted model allows internal and external resources, as well as third-party service providers, to collaborate on a single set of data in the cloud, eliminating the need to create multiple copies of content or perform information hand-offs across disparate networks.

The WorkSite architecture is specifically designed to support HP Autonomy’s cloud, with WorkSite Anywhere eliminating the need for point-to-point VPN connections. WorkSite Anywhere, a core component of WorkSite 9.0, supports HTTPS connectivity from local clients to hosted servers.

Intelligent document and email management

Autonomy WorkSite overcomes the greatest barriers to effective information management by ensuring user adoption through an advanced filing system. The advanced solution eliminates tedious forms and manual classification of each and every asset to enhance the user experience, ensuring that enterprise content is captured for management and leveraged to its highest value.

Even widely-distributed teams can work together on projects, empowering staff to take advantage of available resources and expertise across the globe with the necessary security to restrict access to sensitive data. WorkSite also maintains a comprehensive audit trail for regulatory, legal, or operational purposes. Essential document management features track document versions from initial draft to final form. Email management transforms email from

Highlights

- Robust document management in the cloud – Automatically manage documents, case files, and emails to ensure compliance and productivity
- Advanced search and retrieval – Powered by IDOL, Worksite provides a conceptual and contextual understanding of electronic data with unmatched accuracy of results
- Powerful local cache – Retrieve documents locally whenever possible to maximize performance and enhance the user experience
- Easy-to-use interface – Provides an intuitive and customizable user experience for creating, managing and governing all content
- Petabyte scalability – WorkSite has petabyte scalability, allowing WorkSite to grow to meet all business needs
an isolated knowledge source, visible only to the addressee, to an asset that can be accessed by relevant users across all offices, easily and securely. Email management also enables compliance and simplifies discovery requests by storing related emails and documents in one central location.

Capture, organize, and search email
Since email now constitutes so much of our daily communication, it is imperative that today’s document management solutions offer rich functionality to capture, organize, and search business-related messages. WorkSite in the Cloud fully supports the robust capabilities of WorkSite Email Management. Through an intuitive and smart email toolbar, users can file email directly into WorkSite, manage attachments and search workspaces.

Deep integration with Microsoft Exchange enables suggested filing, server side email filing, synchronized folders, delegate filing and duplicate detection.

Intuitive user experience in the cloud
Autonomy WorkSite offers the most compelling cloud-based user experience through mature and proven desktop clients: DeskSite and FileSite. Users open and save documents from WorkSite naturally through advanced integration with Microsoft Office or Adobe Acrobat. Advanced features, such as document compare, document combine and mail merge are also supported.

Leverage local content for fastest performance
Autonomy OffSite complements WorkSite in the Cloud by caching documents locally, enabling maximum performance by disconnecting performance of the application from the speed of the network connection. Leveraging locally cached files, OffSite enables new and updated files to be updated in the cloud using a sophisticated synchronization and conflict resolution algorithm that quickly and accurately coordinates with the server in the background. OffSite also provides peace of mind to end users who can be assured that their content is always available locally even in those instances when they may be disconnected from the network.
Security in the cloud
Our cloud offering leverages 14 global cloud data centers operated by HP Autonomy. The HP Autonomy cloud currently has over 50 petabytes of customer information under management worldwide in a highly scalable solution manned 24x7 by a dedicated operations staff. The largest private cloud in existence, its global data and eDiscovery processing centers are Safe Harbor-certified, which means your data is protected and can stay within regional or geographic boundaries on request to support legal or privacy related issues. In addition, the HP Autonomy cloud possesses key compliance certifications such as PCI DSS, ISO 27001, and SSAE-16.

Petabyte scalability powered by IDOL
Leveraging its long history of scalable and secure cloud architecture, HP Autonomy delivers massive, enterprise-wide, petabyte scalability without compromising performance, data security, or accessibility under any load. Powered by the Intelligent Operating Data layer (IDOL), WorkSite indexes every version of every document, with support for over 1000 file formats, across 150+ languages.

Elevate your on-premise WorkSite to the cloud
Existing customers can easily upgrade their on-premise WorkSite environments to the cloud and begin to realize the business advantages of cloud computing. WorkSite in the Cloud offers the advantages of WorkSite 9.0 powered by IDOL with minimal capital expenditure.

Ensure disaster recovery and high availability
With WorkSite in the Cloud, organizations can stand up redundant WorkSite environments for business continuity. This solution includes real-time replication of the WorkSite database and native files to ensure 100% uptime in the event of a natural or man-made disaster. Users simply connect to the alternate WorkSite server in the HP Autonomy private cloud and access their business content remotely. When the on-premise servers come back online, any edited content is synchronized back to the production environment. This configuration eliminates the need for organizations to build redundant facilities and manage the complexities of data synchronization.

About HP Autonomy
HP Autonomy is a global leader in software that processes human information, or unstructured data, including social media, email, video, audio, text and web pages, etc. Autonomy’s powerful management and analytic tools for structured information together with its ability to extract meaning in real time from all forms of information, regardless of format, is a powerful tool for companies seeking to get the most out of their data. Autonomy’s product portfolio helps power companies through enterprise search analytics, business process management and OEM operations. Autonomy also offers information governance solutions in areas such as eDiscovery, content management and compliance, as well as marketing solutions that help companies grow revenue, such as web content management, online marketing optimization and rich media management.
