Autonomy Message Manager

Solve Your Escalating Information Challenges: Availability, Storage, Ediscovery, and Compliance

Up to 70% of intellectual property resides within an enterprise messaging system. Increased regulations, discovery obligations, and knowledge sharing make managing this information even more important than ever. Autonomy Message Manager provides a unified content archive that controls and manages electronically stored information and assists with litigation preparedness and response efficiency.

Business Value

Autonomy Message Manager helps you reduce risk by proactively protecting and managing your information assets to meet compliance obligations and prepare for the reactive processes of audit and discovery.

Autonomy Message Manager controls, manages, and protects your electronic information, facilitating archiving, retention management, eDiscovery, and supervision in order to reduce the risk of noncompliance.

Product Overview

Autonomy Message Manager provides a unified content archive to capture electronic information (e.g., email, instant messages, and attachments, etc.), while at the same time allowing you to intelligently index the content, proactively manage its retention, and monitor corporate correspondence for compliance and the prevention of data loss.

“Autonomy Message Manager easily integrates and scales with our messaging environment, reducing storage costs and saving time for users and administrators.”

Paul Cattafi, Sr. Systems Administrator, Hill International, Inc.
Delivery Approach

Autonomy Message Manager can be deployed on-premise or as a managed service to reduce IT costs and overhead.

Autonomy combines best-in-class technologies with a suite of services that avail broad market experiences and demonstrated success in large-scale deployments.

Autonomy provides:

- **Lifecycle Assessments** to define the right strategy and policies for your infrastructure and processes
- **Solution Implementation Assistance** to reduce risk, speed deployment, and lower staff learning curves
- **System Health Checks** to evaluate use, design, and execution
- **Best Practice Assessments** to streamline processes and improve efficiency

Features

Autonomy Message Manager provides a robust electronic archiving solution that supports all major messaging formats, including email, instant messaging (IM), Bloomberg, SharePoint, calendar, tasks, and contacts.

- **eDiscovery and Litigation Support via a Federated Architecture** Promptly respond to litigation challenges and provide defendable processes while reducing the inconveniences, IT burdens, and fees that accompany a lengthy legal process.
- **Industry-leading Monitoring, Supervision, and Review** Provides pre- and post-review supervision capabilities of outbound, inbound, and internal communications to assist with regulatory compliance and corporate policies. Autonomy helps you address these challenges by cost-effectively managing and securing your messaging systems and content as you would other critical applications and data.
- **Mailbox Management** Provides users with a transparent, seamless email experience with support for all major email solutions (Microsoft Exchange, Lotus Notes, and Novell GroupWise) and email access from the email client, through the web and offline
- **PST/NSF Capture** Automatically identify and capture PST/NSF files on desktops and devices on the network to facilitate their ingestion into the archive
- **Microsoft SharePoint Support** Archive and search files, calendars, and tasks
- **Advanced Retention Management** Provides tools that simplify and automate the tracking of stale content based on corporate retention or group policies and enables organizations to create folders with set retention policies inside the user’s mail client
- **Virtualized, Highly Scalable, Distributed Architecture** Expands with your growing business needs so you can not only respond to the challenges of today, but also anticipate and react to the trials of tomorrow
- **Improve Ingestion, and Reduce Hardware and Storage Requirements** Fast and efficient mail processing, indexing, de-duplication, and single-instance storage techniques, along with support for leading storage devices, enable organizations to store and retain business-critical information while reducing hardware and storage footprints
- **Single Point of Administration** Increases productivity for monitoring and reporting
- **Essential Business Continuance** Improves manageability of messaging applications, which enables more efficient backup and restore operations to facilitate high-availability and user access to email systems
- **Flexibility** Apply and implement your policies and processes with what works for your business
- **Integration with Records Management** Enables proactive risk management for continuous compliance with integrated records management via U.S. DoD 5015.2 certified Autonomy Records Manager
Benefits

In today’s high-tech business environment, you need a comprehensive information protection and governance strategy to help you manage the ever-increasing stores of electronic communication and comply with strict regulations. Whether you choose to deploy on-premise or off, Autonomy Message Manager can help you reduce threats, decrease user dependency, and harness growing terabytes of data, enabling you to:

- **Provide litigation support and facilitate repeatable processes.** Process enterprise-wide eDiscovery requests and track data loss activity centrally with executive dashboards and reports.
- **Reduce dependency on IT and end users to search, preserve, retrieve, and produce evidence.**
- **Minimize disruption to IT and business processes within your organization.**
- **Create a defensible framework for enterprise-wide compliance with consistent policy application and retention across the firm.**
- **Minimize business risks by enforcing the proper use of sensitive and valuable business information across the enterprise, including personal information, trade secrets, and other nonpublic information.**
- **Conduct intelligent email surveillance and monitoring.**
- **Support mixed email environments, which provides investment protection and management flexibility, reduces implementation time and costs, and accelerates your achievement of ROI.** Future-ready performance, scalability, and security.
- **Rapid and flexible deployment options for on- or off-premises hosted service.**
- **Hosted service offering delivers IT savings, lowering the costs of management and support of the messaging environment, and on-demand scalability.**
About Autonomy

Autonomy Corporation plc (LSE: AU. or AU.L), a global leader in infrastructure software for the enterprise, spearheads the Meaning Based Computing movement. IDC recently recognized Autonomy as having the largest market share and fastest growth in the worldwide search and discovery market. Autonomy’s technology allows computers to harness the full richness of human information, forming a conceptual and contextual understanding of any piece of electronic data, including unstructured information, such as text, email, web pages, voice, or video. Autonomy’s software powers the full spectrum of mission-critical enterprise applications including pan-enterprise search, customer interaction solutions, information governance, end-to-end eDiscovery, records management, archiving, business process management, web content management, web optimization, rich media management and video and audio analysis.

Autonomy’s customer base is comprised of more than 20,000 global companies, law firms and federal agencies including: AOL, BAE Systems, BBC, Bloomberg, Boeing, Citigroup, Coca Cola, Daimler AG, Deutsche Bank, DLA Piper, Ericsson, FedEx, Ford, GlaxoSmithKline, Lloyds Banking Group, NASA, Nestlé, the New York Stock Exchange, Reuters, Shell, Tesco, T-Mobile, the U.S. Department of Energy, the U.S. Department of Homeland Security and the U.S. Securities and Exchange Commission. More than 400 companies OEM Autonomy technology, including Symantec, Citrix, HP, Novell, Oracle, Sybase and TIBCO. The company has offices worldwide.
