

Stonesoft Authentication Server

April 2013

Human-to-cloud secure authentication experience

The Stonesoft Authentication Server gives you authenticated access to the cloud — the way you want, on the devices you want.

Quick to deploy, the Authentication Server offers unrivalled ease of governance through the award-winning Stonesoft Management Center.

Because smartphones and tablets are what people carry with them, ergonomic authentication supports mobile devices. There is no need to invest in hardware tokens or in training key employees to use them.

As a seamlessly integrated part of the ergonomic and powerful Stonesoft Management Center, the Authentication Server offers ease of configuration and use, as well as minimized total cost of ownership and enhanced reporting.

The Stonesoft Authentication Server is a part of the Stonesoft Authentication Solution. For the ultimate secure access to the cloud, the full solution is a powerful identity provider for your federated authentication needs.

STONESOFT

Stonesoft Authentication Server Specifications

SPECIFICATIONS

Max number of Authentication Server clusters per SMC	1
Max number of named users	100 000
Authentication protocol	Radius

FEATURES
